

**Amendments to the Specification:**

Please amend the paragraph beginning on Page 4, line 11, as follows:

~~Fig. 3 illustrates~~ Figs. 3a and 3b illustrate part of a display panel comprising a plurality of display units according to ~~[[a]] preferred embodiment~~ embodiments of the invention.

Please amend the paragraph beginning on Page 7, line 30, as follows:

In Fig. ~~[[3]]~~ 3a, part of a display 10 comprising display units 1 according to a preferred embodiment of the invention is shown in a plan view. Four sets of display units 1, each set 1 including three display units 1 (i. e. three different color filters 4, one for each color, red, green and blue) are shown. The color filters can also be combined in strips; however, this is not shown. Each color filter 4 is provided with a rectangular reflector 2 provided in the center thereof. Distances 4a, herein a black mask, is also provided, dividing the display panel 10 into the respective display units 1. The display units 1 can be multiplied to any suitable number of units 1 making up a complete display. Also, as shown in Fig. 3b, each color filter 4 may include a circular reflector 2 rather than the rectangular reflectors of Fig. 3a. The display including liquid crystal (LC) layer and lighting system (not shown) is then assembled in a portable electronic device such as a mobile phone, which is illustrated in Fig. 4. It is not necessary that the electronic device is able to communicate in the same way as a mobile phone, but any portable electronic device where there is a need for a better display could benefit from the invention.
